

Amphibian & Reptile Survey ***of Minnesota***

Support Minnesota's Herpetofauna

The Amphibian & Reptile Survey of Minnesota was created with three primary objectives in mind:

- Increase citizen participation in amphibian and reptile data collection throughout Minnesota.
- Document turtle-road crossing and mortality hotspots through the Minnesota Turtle Crossing Tally and Count Project, with an emphasis on Blanding's Turtles (*Emydoidea blandingii*) and Wood Turtles (*Glyptemys insculpta*).
- Make data available to conservation and research organizations.
